

Fullwhite Screen

the borderless projection screen

The further development of mobile projection screens for applications where invisible technology and puristic design is required. With the minimalistic design this projection screen fits easily in every optical superior installation. Universal, invisible mounting options as well as high stability and flexibility are proven by our philosophy of projection screen systems.

The plug-in frame system (patent pending) is characterized by maximum flexibility and allows nearly every frame size.

A tear-resistant fabric layer, which reinforces the surface corners, guarantees high safety and durability. View version surface with hook-and-loop tape.

The clamp connector guarantees a secured and solid connection, like a monolithic system.

The projection surface is tensioned over the frame and fixed on the frame backside with hook-and-loop tape or hooks. View version surface with hook-and-loop tape.
